About AglowTech

AglowTech is a leading-edge skill development and training center dedicated to the development of computer, technology, and information systems skills.

At AglowTech, we don't just train you - we also help you develop a skill. Our programs are different from those of other training institutions or centers - we are more than a training institution - we are also a skill development center. While some training institutions only try to help you pass some certification examinations and others help you obtain a diploma or training certificate, they don't ensure, at the end of the program, that you have the necessary skill and/or experience to easily find and keep a lucrative job. We are committed to helping you develop a competent and useful skill with real and practical experience to help you easily and confidently secure and maintain a job.

Due to the proliferation of many people who are certified, most of the employers are now looking for those who have the industrial experience, with or without the certification. As a result, one of the paramount goals at AglowTech is to help our students find and secure a high paying job. Our students are trained in industrial-type setting with industrial-type and real world problems.

Types of Programs

The programs at AglowTech are divided into four: (1) Certification training - for those who are only interested in undergoing the necessary training to take and pass some certification examinations.

(2) Certification and skill development - for those who are interested in preparing for some certification examination and also obtaining industrial-type experience to increase their chances of finding and securing a job
(3) Skill development - for those who have undergone some training and are interested in obtaining industrial-type experience. (4) Corporate/ Personal - for those who are interested in training in one or more specific areas as a result of career requirements or for personal reasons. AglowTech is equipped and dedicated to helping every participant in its program to achieve his/her goals and expectations.

Center for Software Engineering Excellence

The Software Engineering Excellence Lab. is the primary center for software and programming related training at AglowTech. The center is equipped with the state-of-the-art in software engineering tools and technologies. Every student enrolled in software related training is required to complete a project at the Center using industry standard tools and technologies. The projects are con-

ducted as real industry projects involving all the required and necessary processes.
